

Ybco Superconductor Research Progress Nova Science

Chapter 1 : Ybco Superconductor Research Progress Nova Science

The jan evetts superconductor science and technology award 2018 - the winners are announced we are delighted to announce the winners of this award: Superconductivity, a clear-cut quantum phenomenon of zero electrical resistivity and perfect diamagnetism, was discovered in 1911 for mercury . an extensive search for novel superconductors, in particular materials with higher critical temperature (T_c), has been performed since then. Superconductivity is a remarkable phenomenon: superconductors can transport electric current without any resistance and thus without any losses whatsoever. it is already in use in some niche areas American interest in "gravity control propulsion research" intensified during the early 1950s. literature from that period used the terms anti-gravity, anti-gravitation, baricentric, counterbary, electrogravitics (egrav), g-projects, gravitics, gravity control, and gravity propulsion. Type or paste a doi name into the text box. click go. your browser will take you to a web page (url) associated with that doi name. send questions or comments to doi Professor andy hor university of hong kong (china) professor andy hor is the vice president and pro-vice-chancellor (research) and chair professor of metallic chemistry & materials in the university of hong kong (hku).
