Child Rights and Displacement in East Africa Cherie C. Enns 2022-09-01 Focusing on the intersection of spatial justice, child rights, and planning policy, this book investigates the challenges of resettlement in East Africa, where half of those displaced are children. The challenges created by displacement and resettlement are often considered from an adult-centric perspective by planners and humanitarian and development experts. The spatial injustice of displacement and resettlement, the agency of children, and the application of tools such as Child Participatory Vulnerability Index (CPVI) is siloed, commonly overlooked, or discounted. This book uses a CPVI and rights-based assessment of land-use policies, to investigate resettlement due to

conflict and settlement in northern Uganda, floods due to climate change in Dar es Salaam, Tanzania, and urban to rural migration of children due to the aids pandemic in Western Kenya. Case studies from over a decade of field research are integrated with examples from applied planning projects and policy development in the East Africa region. This book uses spatial justice theory to show how child-friendly planning approaches can positively promote child rights in the context of resettlement. Providing important insights on how to enact child-friendly planning in informal settlements, refugee camps, and displacement camps, this book will be of interest to planning and development professionals, and researchers across the fields of children's rights, Development Studies, Planning, and African Studies.

Reviewing the Living Environment Rick Hallman 2006-03-31 This review book provides a complete review of a one-year biology course

that meets the NYS Living Environment Core Curriculum. Includes four recent Regents exams. Management Accounting in Supply Chains Andreas Taschner 2020-07-15 Companies more and more compete as integrated supply chains rather than as individual firms. Success of the entire supply chain (SC) determines the economic well-being of the individual company. With management attention shifting to supply chains, the role of management accounting (MAC) naturally must extend to the cross-company layer as well. MAC can make a significant contribution to SC success, but is faced with a multitude of problems and challenges when trying to do so. Students both in supply chain management (SCM) or management accounting (MAC) respectively, are typically not familiarized with these issues. There is still a clear gap in higher education teaching when it comes to management accounting in a cross-company setting. This textbook wants to fill the gap. It targets students

who are already familiar with the fundamentals of accounting and now want to extend their expertise in the field of cross-company (or network) management accounting - with supply chains being the typical case in point. Practitioners might draw valuable insights from the text as well. This textbook has been developed for university courses conducted in English language, especially in Germany, Austria and Switzerland.
