Linear Algebra Edgar G Goodaire 2013-09-20 This is a matrix-oriented approach to linear algebra that covers the traditional material of the courses generally known as "Linear Algebra I" and "Linear Algebra II" throughout North America, but it also includes more advanced topics such as the pseudoinverse and the singular value decomposition that make it appropriate for a more advanced course as well. As is becoming increasingly the norm, the book begins with the geometry of Euclidean 3-space so that important concepts like linear combination, linear independence and span can be introduced early and in a "real" context. The book reflects the author's background as a pure mathematician – all the major definitions and theorems of basic linear algebra are covered rigorously – but the restriction of vector spaces to Euclidean n-space and linear transformations to matrices, for the most part, and the continual emphasis on the system $Ax=b$, make the book less abstract and more attractive to the students of today than some others. As the subtitle suggests, however, applications play an important role too. Coding theory and least squares are recurring themes. Other applications include electric circuits, Markov chains, quadratic forms and conic sections, facial recognition and computer graphics.

Multimedia, Computer Graphics and Broadcasting Dominik Slezak 2010-05-10 As future generation information technology (FGIT) becomes specialized and fr- mented, it is easy to lose sight that many topics in FGIT have common threads and, because of this, advances in one discipline may be transmitted to others. Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole. Of particular interest are hybrid solutions that c- bine ideas taken from multiple disciplines in order to achieve something more signi- cant than the sum of the individual parts. Through such hybrid philosophy, a new principle can be discovered, which has the propensity to propagate throughout mul- faceted disciplines. FGIT 2009 was the first mega-conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT, conducted by separate scientific committees, but coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications (ASEA), Bio-Science and Bio-Technology (BSBT), Control and Automation (CA), Database Theory and Application (DTA), D- aster Recovery and Business Continuity (DRBC; published independently), Future G- eration Communication and Networking (FGCN) that was combined with Advanced Communication and Networking (ACN), Grid and Distributed Computing (GDC), M- timedia, Computer Graphics and Broadcasting (MulGraB), Security Technology (SecTech), Signal Processing, Image Processing and Pattern Recognition (SIP), and e-Service, Science and Technology (UNESST).

The Magic of Language Thomas Tinnefeld 2020-12-28 Language is magic. This magic happens when new ideas come to our minds or when we come across notions which are new to us, i.e. when we use language productively and construct our own world. The magic (in the productivity) of language works in various linguistic areas, e.g. phonetics, lexicology, phraseology, pragmatics, languages for specific purposes and multilingualism. In language teaching and learning, this magic comes into effect when language meets content, when we try to adapt our teaching to our learners' needs or when we need to leave our comfort zone to take risks. With contributions by Lizeta Demetriou, Bessie Dendrinou, Olga Dobrunoff, Rashit Emini, Douglas Fleming, Thomas H. Goetz, Ourania Katsara, Bernd Klewitz, Katrin Menzel, Torten Piske, Lea Pöschik, Ronald Kresta, Nikolay Slavkov, Anja Steinlen, and Brikena & Gëzim Xhaferi, this edited volume features articles that cover a diversity of research findings which deal with the magic of language in various contexts and linguistic settings in Europe, America and Asia.
